# Generic Class Datasets: Years 7 to 11

This pack contains collated, hypothetical and anonymised data for mixed-attainment Year 7, Year 8, Year 9, Year 10 and Year 11 classes. It is designed to help you analyse learners' starting points and plan targeted adaptations across a short learning sequence (4–6 lessons).

**How to read and use the data**

- Start with the cohort overview
- Use the diagnostics summary to select *one or two priority gaps* you will tackle explicitly in your sequence.
- When planning adaptations, note the universal supports you'll build in for all (modelling, success criteria, dual-coded summaries), and the targeted adjustments you'll make for named pupils (e.g., scaffolded texts, alternative recording, structured talk).
- Build in quick progress checks (exit tickets, mini-quizzes) to monitor impact between lessons.

**Ethical use and limitations**

*Important: use the information to inform, not determine, planning. Avoid assumptions based on labels alone; focus on strengths, barriers and subject-relevant pedagogical responses.*

- Data are hypothetical and anonymised; treat them as a planning stimulus rather than a judgement.
- Measures are indicative and should be triangulated with the work you set and the responses you observe in your sequence.

## 7X: Year 7 class

| Surname | Forename | Verbal SAS | Quantitative SAS | Non-verbal SAS | Mean SAS | Reading Age | PP | LAC | EAL | SEND | Broad Area | Specific Need | Secondary Broad Area | Secondary Specific Need |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| BARTON | SARAH | 79 | 74 | 74 | 75 | 6.8 | | | | E | C&I | SLCN | SEMH | ADHD |
| CUNNIFF | CHERYL JOANNE | 91 | 98 | 93 | 94 | 9.1 | | | French | K | C&L | MLD | P&S | VI |
| DEMPSTER | ANNE | 82 | 77 | 74 | 77 | 7.2 | Y | | | | | | | |
| DIGNAM | SAMANTHA | 83 | 79 | 79 | 80 | 7.5 | | | | K | SEMH | ADHD | | |
| GANNON | RACHEL | 95 | 89 | 93 | 92 | 9.3 | | Y | | K | SEMH | Anxiety | | |
| GILLETT | HELEN KATE | 98 | 103 | 109 | 103 | 11.4 | | | | | | | | |
| GLYNN | JENNY | 82 | 89 | 95 | 88 | 7.4 | | | | | | | | |
| LABUDA | FATIMA | 86 | 79 | 73 | 79 | 7.1 | | | | E | C&I | ASC | C&L | SPLD |
| LINTHWAITE | HAYLEY ANNE | 80 | 87 | 85 | 84 | 9.1 | Y | | | | | | | |

| RHODES | CATHERINE | 84 | 82 | 83 | 83 | 7.8 | | | | K | S&P | VI | | |
| SCHOLES | JAYNE | 97 | 102 | 109 | 102 | 12.1 | | | | | | | | |
| SMART | NATALIE LOUISE | 83 | 87 | 82 | 84 | 7.4 | | | | | | | | |
| STATHAM | JESSICA STEPHANIE | 78 | 80 | 81 | 79 | 6.8 | | | | | C&I | ASC | | |
| ADAMS | TOM | 90 | 85 | 87 | 87 | 10.5 | Y | | | K | C&L | MLD | | |
| BAKER | LUCAS | 85 | 80 | 83 | 83 | 9.6 | | | Arabic | K | C&I | ASC | SEMH | Anxiety |
| CLARKE | MEGAN | 76 | 79 | 74 | 76 | 8.3 | | | | | | | | |
| DAVIS | ELLA | 93 | 95 | 90 | 93 | 11.1 | | | | K | SEMH | ADHD | | |
| EVANS | JACK | 88 | 85 | 88 | 87 | 10.2 | Y | | | | | | | |
| FOSTER | SOPHIE | 82 | 84 | 83 | 83 | 9.4 | | | | | | | | |

**SAS - Standardised Age Score - 100 represents an "average" pupil**

Verbal = vocabulary, sentence construction, verbal classification and verbal analogies

Quantitative = quantitative relationships, number series and equation building

Non-verbal = fluid intelligence/problem solving
K – SEND Support
E – EHCP

## Sarah Barton

Sarah has social interaction and communication needs. Without reminders, she can find it challenging to start work promptly, maintain focus on presentation, and stay on task. Sarah also struggles to stop talking during lessons, but she recognises that receiving reminders and support is helpful for her. She feels working in a small group with an adult and having instructions repeated would benefit her learning. Sarah enjoys activities such as playing with Lego, reading, and swimming.

### Reasonable adjustments and continuous provision

- Morning LSA Check-in (Daily).
- Morning HoY Check-in (Daily).
- Small group work when possible.
- Encourage Sarah to use self-monitoring strategies, such as marking off completed steps or using timers to pace work.
- Coordinate closely with LSAs and Head of Year to monitor Sarah's progress and wellbeing through regular check-ins and adjustments.
- Scaffolded teaching (cognitive science informed teaching).
- Allow short, frequent breaks to prevent overload and support sustained attention.
- Provide clear, consistent verbal and visual instructions, with repetition and chunking of information to aid comprehension and memory.
- Modelling of all tasks.

### Targets

- By the end of the term, Sarah will correctly sequence steps in her learning tasks (e.g., ordering instructions, stages in problem-solving) in at least 4 out of 5 opportunities, as observed by her teacher.
- By the end of the term, Sarah will revisit and consolidate previously taught concepts at least twice weekly, demonstrating improved recall and understanding in 80% of follow-up tasks.
- By the end of the term, Sarah will demonstrate responding positively to peers and asking for help appropriately in 3 out of 4 observed classroom situations, as recorded during teacher observations.

## Fatima Labuda

Fatima has a diagnosis of Autism Spectrum Condition (ASC), with particular differences in social communication and interaction. She interprets language in a very literal way and can find it difficult to regulate her emotions. Fatima benefits greatly from a consistent routine and a calm environment. She enjoys learning, asking questions, gaming, reading, and playing football. Feeling happy is very important to her.

Adults working with Fatima should be mindful of her slower information processing speed. The pace at which new material is introduced should be adapted for her, and she requires extra processing time or opportunities to rehearse information before applying it.

### Reasonable adjustments and continuous provision

- Weekly small group social communication and relationship skills intervention.
- Small classes where possible
- Use clear, concrete, and literal language with visual supports to complement verbal instructions.
- Break down complex tasks into smaller, manageable steps and provide written and verbal instructions.
- Provide access to assistive technology such as visual timers, voice-to-text software, or reading aids to support learning. Pre-teaching vocabulary.
- Short, weekly interventions working on developing memory strategies.
- Emotion literacy intervention with the ELSA

- Time out pass for regulation

**Targets**

- By the end of the term, Fatima will use memory strategies (e.g., chunking, visual prompts) to recall and apply information in at least 4 out of 5 observed classroom tasks, as evidenced through teacher records.
- By the end of the term, Fatima will learn and accurately use 5 new subject-specific vocabulary words per week in her reading and written work, achieving at least 80% accuracy in application.
- By the end of the term, Fatima will demonstrate improved social communication by taking turns in conversations and using appropriate responses in 3 out of 4 structured group activities, as observed by staff.
- By the end of the term, Fatima will use self-regulation strategies (e.g., breathing exercises, time out, asking for help) in 70% of situations when she begins to feel dysregulated, as noted in staff observations or behaviour logs.

## 8BX: Year 8 class

E – EHCP

# Detailed learner profiles

## Oliver James

Oliver has been identified with Autism Spectrum Condition (ASC) and is currently being assessed for ADHD. He has an individual behaviour plan in place, along with weekly reviews to support his emotional and behavioural needs in school. Oliver benefits most from a calm, low-stimulation classroom environment where he can focus on his learning. He prefers working in smaller groups as this helps him concentrate without distraction and enjoys opportunities to work alongside adults. Oliver also likes being helpful with tasks around school. At home, spending time with his family and pets brings him a lot of happiness.

### Reasonable adjustments and continuous provision

- 1:1 LSA support in most lessons
- Morning LSA Check-In (daily)
- Afternoon HoY Check-In (daily)
- Use of clear, consistent daily schedules with visual timetables to reduce anxiety and increase predictability.
- Break tasks into smaller, manageable steps with frequent checkpoints to support focus and reduce overwhelm.
- Provide regular, planned sensory breaks or movement opportunities to help regulate sensory needs and reduce restlessness.
- Ensuring instructions and teaching materials are presented both visually and verbally to aid comprehension (dual coding).
- Provide opportunities for Oliver to take on leadership or helpful roles within the classroom to boost engagement and confidence.
- Scaffolded teaching (cognitive science informed teaching)
- Small group work when possible
- Time-out pass for regulation and sensory needs

### Targets

- By the end of the term, Oliver will work independently on a task that is appropriately matched to his level for 5–10 minutes, sustaining concentration in at least 4 out of 5 observed opportunities, as recorded by his teacher.
- By the end of the term, Oliver will be supported and encouraged to participate in class and group discussions through structured activities and established classroom routines, contributing appropriately in 3 out of 4 observed sessions.
- By the end of the term, Oliver will demonstrate improved emotional regulation by using at least two calming or self-regulation strategies (such as deep breathing or requesting a break) in 4 out of 5 situations where he begins to feel overwhelmed, as recorded by staff observations.

## Emma Thompson

Emma has a diagnosis of Attention Deficit Hyperactivity Disorder (ADHD) and has also been recently identified as having dysgraphia. She experiences difficulties with processing and sensory regulation, along with some growth-related concerns.

Emma often has creative and thoughtful ideas but finds it challenging to express these effectively in writing. Issues with spacing and words blending together can make this harder, and she benefits from working in quieter, low-stimulation environments. Emma communicates well verbally, but when conversing it is important to maintain eye contact with her to support understanding and engagement.

Emma demonstrates relative cognitive challenges in areas such as visual-spatial skills, auditory working memory, and processing speed. She also struggles with aspects of executive functioning, including impulsivity, organisation, and monitoring tasks. Remaining focused during lessons can be difficult for Emma, and she may sometimes act on impulse. She also faces challenges with managing and regulating her emotions.

**Reasonable adjustments and continuous provision**

- 1:1 support in all lessons
- Adaptive Writing Technology/Dictaphone – where there is less focus on writing
- Exam access arrangements – 25% extra time/scribe
- Scribe in all lessons that involve extended or heavy focus on writing
- Break writing tasks into smaller, manageable steps with clear rubrics and examples.
- Scaffolded teaching (cognitive science informed teaching)
- Supply printed handouts or typed notes to reduce copying from the board and ease written workload.
- Allow use of speech-to-text software or audio recorders for note-taking and assignments.
- Provide paper with colored or raised lines to assist with letter formation and spacing.
- Time-out pass for regulation
- Encourage use of organisational aids such as checklists, planners, and timers.

**Targets**

- By the end of the term, Emma will actively engage with learning and demonstrate progress by using improved organisational skills to independently plan and manage her tasks in at least 4 out of 5 lessons, as observed by her teacher.
- By the end of the term, Emma will develop independent organisational strategies (such as using checklists or planners) and sustain focus throughout lessons, achieving on-task behaviour for at least 80% of the lesson duration in 4 out of 5 observed sessions.
- By the end of the term, Emma will request support when needed and be able to clearly explain to the teacher the type of help she requires during classroom activities in 4 out of 5 opportunities, enabling her to stay on task and make progress in line with her peers.

## 9YT: Year 9 class

## Detailed learner profiles

**Sharron Ashby**

Sharron has a diagnosis of Autistic Spectrum Condition (ASC). She has previously received support and advice from speech and language therapy. In school, Sharron requires additional support with both her speech and listening skills, as well as with expressing her feelings and emotions. She also benefits from reminders about her behaviours. Sharron's understanding of the world can be very literal, and she responds positively to clear structures that help her make sense of situations.

At times, Sharron uses a very loud voice. However, she has been observed lowering her voice when adults model a softer tone or whisper. Sharron particularly enjoys writing, Maths, and Science. She is keen to learn new things and is happy to participate in group activities, often contributing to discussions. To support her behaviour, Sharron benefits from an environment with clear rules, consistent routines, and well-defined rewards. Sharron does not have any specific health needs.

**Reasonable adjustments and continuous provision**

- 1:1 support in all lessons
- Designated LSA assigned as a caseworker
- Scaffolded teaching (cognitive science informed teaching)
- Use clear, literal language and visual supports to aid comprehension and reduce misunderstanding.
- Small group work when possible
- Time-out pass for emotional regulation
- Plan transitions carefully with advance warning and support to manage changes in routine.
- Foster peer buddy systems to encourage positive social interaction and inclusion.
- Visual timetable
- Dual coding

**Targets**

- By the end of the term, Sharron will work within small groups during structured activities to develop her turn-taking and sharing skills, successfully participating in 4 out of 5 opportunities as observed by staff.
- By the end of the term, Sharron will actively contribute to class and group discussions through purposeful dialogue and following classroom routines, doing so in at least 3 out of 4 observed sessions.
- By the end of the term, Sharron will have opportunities to engage in repetition, reinforcement, and retrieval of new concepts, demonstrating improved recall and understanding in 80% of related tasks as recorded by her teacher.

## Charlotte Dickinson

Charlotte has been referred to the Attention Deficit Hyperactivity Disorder (ADHD) Pathway and the Autism Spectrum Condition (ASC) Pathway. She has experienced Vasovagal episodes (fainting) in the past, with no confirmed cause, though these are thought to be linked to external stressors. Charlotte is determined and values her independence. She has a strong interest in learning about different cultures, particularly Korean food.

Charlotte can be very sensitive to comments, especially those about her physical appearance. Such remarks can upset her, and if situations are not handled carefully, she may react. In these moments, Charlotte benefits from reassurance and access to a quiet space where she can calm down. When feeling overwhelmed, she should be provided with a time-out room to regulate her emotions.

Charlotte requires additional support in understanding subject content, as she is currently behind in most areas with the exception of PE. She would benefit from extra lessons to help her catch up and ensure she fully understands the material being taught.

**Reasonable adjustments and continuous provision**

- 1:1 designated LSA available (Daily check-ins/check-outs)
- 1:1 support available to help to simplify and explain things
- Break down tasks into smaller, manageable steps with clear instructions and frequent check-ins.
- Scaffolded teaching (cognitive science informed teaching)
- Permit use of noise-cancelling headphones or quiet zones when sensory overload is a risk.
- Offer extended time for assignments and assessments to accommodate processing needs.
- Small group work when possible
- Facilitate peer mentoring or buddy systems to encourage social engagement and confidence.
- Time-out pass – ELSA support and Zones of Regulation
- Toilet pass for medical reasons

**Targets**

- By the end of the term, Charlotte will work with sustained effort on tasks appropriately pitched to her level, maintaining focus for at least 80% of the lesson duration in 4 out of 5 observed sessions, resulting in measurable progress.
- By the end of the term Charlotte will be encouraged and supported to participate in class and group discussions, making meaningful and respectful contributions in at least 3 out of 4 observed sessions.
- By the end of the term, Charlotte will develop self-regulation skills to recognise and manage her emotions, using coping strategies such as breathing exercises or requesting breaks in 3 out of 4 appropriate situations, contributing to a positive learning environment

# Generic Key Stage 4 Class Datasets

## Year 10 and Year 11 | Planning stimulus

These datasets extend the existing Key Stage 3 resource for trainees whose subject is taught principally or exclusively at Key Stage 4. They are deliberately subject-neutral and can be interpreted through any curriculum area. All names, scores, needs and profiles are hypothetical and anonymised.

### How to use the data

Begin with the cohort overview and identify patterns, variation and possible starting points.

Select one or two priority barriers or gaps that are directly relevant to the chosen 4–6 lesson sequence.

Distinguish between universal provision for the whole class and targeted adjustments for particular pupils.

Use assessment during the sequence to test whether planned adaptations are improving access and learning.

Avoid making assumptions from labels alone. Triangulate the data with pupils' work and responses to teaching.

## Key

SAS = Standardised Age Score (100 represents the age-standardised average) | PP = Pupil Premium | LAC = Looked After Child | EAL = English as an Additional Language | K = SEND Support | E = EHCP | C&I = Communication and Interaction | C&L = Cognition and Learning | SEMH = Social, Emotional and Mental Health | S&P = Sensory and/or Physical | ASC = Autism Spectrum Condition | SLCN = Speech, Language and Communication Needs | MLD = Moderate Learning Difficulties

# 10X: Year 10 class

This mixed-attainment class contains 20 pupils. The dataset is hypothetical and anonymised.

| Surname | Forename | Verbal SAS | Quant. SAS | Non-verbal SAS | Mean SAS | Reading age | PP | LAC | EAL | SEND | Broad area | Specific need | Secondary area | Secondary need |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Ahmed | Samira | 96 | 102 | 105 | 101 | 13.2 | Y | | Arabic | | | | | |

## Detailed learner profiles

### Tyler Jones

Tyler has an Education, Health and Care Plan for moderate learning difficulties and speech, language and communication needs. He is friendly, responds positively to encouragement and enjoys practical tasks, sport and working with familiar peers. He can need additional time to process spoken information, identify key vocabulary and organise longer responses. Tyler is more confident when routines are predictable and when he can see a clear model of the expected outcome.

### Reasonable adjustments and continuous provision

- Provide concise verbal instructions alongside a written or visual version.
- Check understanding privately and allow additional processing time before expecting a response.
- Break longer tasks into manageable stages, with a clear model and success criteria.
- Reduce unnecessary copying and provide access to key vocabulary.
- Use planned paired or small-group work while maintaining opportunities for independent practice.

### Targets

- By the end of the term, Tyler will use a subject-specific vocabulary prompt to explain a key idea accurately in 4 out of 5 opportunities.
- Tyler will follow a multi-step task using a checklist and complete each stage with no more than one adult prompt in 4 out of 5 lessons.
- Tyler will independently review his work against success criteria and identify one appropriate improvement in 3 out of 4 assessed tasks.

## Ruby Fletcher

Ruby is supported for anxiety and is also looked after by the local authority. She is conscientious, creative and usually produces thoughtful work when she feels secure. Unfamiliar groupings, public correction and timed tasks can increase her anxiety. If unsure, Ruby may remain quiet rather than seek clarification. She benefits from calm routines, advance notice of change and discreet opportunities to check her understanding.

### Reasonable adjustments and continuous provision

- Maintain predictable lesson routines and give advance notice of significant changes.
- Offer a discreet method for requesting help or clarification.
- Avoid unnecessary public correction and provide feedback sensitively.
- Prepare Ruby for unfamiliar collaborative tasks by clarifying roles and expectations.
- Use low-stakes checks before formal or timed assessment.

### Targets

- Ruby will use an agreed strategy to request clarification in 3 out of 4 situations where she is unsure.
- Ruby will contribute at least once during a structured paired or small-group task in 4 out of 5 lessons.
- Ruby will apply an agreed regulation strategy and begin a timed task within five minutes in 4 out of 5 opportunities.

# 11Y: Year 11 class

This mixed-attainment class contains 20 pupils. The dataset is hypothetical and anonymised.

| Surname | Forename | Verbal SAS | Quant. SAS | Non-verbal SAS | Mean SAS | Reading age | PP | LAC | EAL | SEND | Broad area | Specific need | Secondary area | Secondary need |

# Detailed learner profiles

## Amelia Green

Amelia has an Education, Health and Care Plan for Autism Spectrum Condition, with anxiety identified as a secondary need. She has strong factual recall, a keen eye for detail and enjoys independent reading, creative projects and subjects involving clear systems. She can interpret language literally and may find ambiguous instructions, sudden changes and open-ended tasks difficult. During periods of heightened anxiety, Amelia may become quiet and need time in a lower-stimulation space before returning to learning.

**Reasonable adjustments and continuous provision**

- Use precise language and clarify figurative, ambiguous or implied meanings where they are relevant.
- Provide advance notice of changes to routines, rooms or task expectations.
- Structure open-ended tasks with staged prompts while retaining the intended challenge.
- Allow access to an agreed low-stimulation space and a clear return-to-learning routine.
- Provide processing time before discussion and do not require immediate public responses.

**Targets**

- Amelia will identify the requirements of an unfamiliar task using a planning prompt in 4 out of 5 opportunities.
- Amelia will use an agreed regulation strategy and return to learning within the planned timeframe in 4 out of 5 observed situations.
- Amelia will contribute a relevant idea in a structured discussion or alternative recorded format in 3 out of 4 opportunities.

## Holly Taylor

Holly has an Education, Health and Care Plan for visual impairment and speech, language and communication needs. She is sociable, persistent and enjoys discussion, music and practical learning. Small print, densely presented resources, information displayed at a distance and rapid verbal explanations can create barriers. Holly uses magnification and benefits from accessible digital materials, clear descriptions of visual information and sufficient time to formulate spoken responses.

**Reasonable adjustments and continuous provision**

- Provide accessible digital copies in advance where possible, using clear layout and appropriate contrast.
- Describe essential visual information verbally and avoid relying on colour alone.
- Seat Holly according to her current access plan and keep routes around the room clear.
- Allow use of magnification and additional time for reading or interpreting visual material.
- Check understanding after extended verbal explanations and support key vocabulary.

**Targets**

- Holly will independently select and use the appropriate access tool for a learning task in 4 out of 5 lessons.
- Holly will use a vocabulary or planning prompt to give a developed verbal or written response in 3 out of 4 assessed tasks.
- Holly will identify and communicate an access barrier or required adjustment before beginning a task in 4 out of 5 opportunities.
